

## **Data Center Infrastructure Experts**

**Complete Infrastructure Management**

**ISO 9001:2008**

**Member BICSI**

# Highly Skilled and Certified Technicians

## The iBT Difference...

**Who** are we? interBay Technologies specializes in Data Centers of all sizes and types, including public, private, wholesale, CLEC, ILEC, Meet Me Rooms (MME's) and video (VSO / VHO). An outage in a Data Center is not an inconvenience, it is simply unacceptable. Because iBT technicians only work in Data Centers, they understand this and live it every day.

## We certify and test everything... 3x

**What** is your expectation of quality? Would triple testing, documenting and auditing each phase qualify?

## One less thing to worry about...

**When** you partner with iBT for your data center infrastructure. We provide complete integration and turnkey infrastructure including cabling, fiber, cable and fiber trays, racks, patch panels, patch cords and cabinets, service, moves, additions, changes and removals / decommissions.

## It makes \$ense...

**Why** choose iBT? We have experience in some of the most intensive and secure voice and data environments. We have relationships with many of the top data center professionals including architects, power distribution, consultants, cabinet and material manufacturers.

## Plan for the future...

**Where** will you be in a few years? An iBT partnership will help you chart and plan so that you'll be ready for whatever you might need.

## Let iBT provide...

A complete assessment and proposal for your data center needs. You'll be surprised that best in class is more affordable than you thought.
